

KENYAN PROPTech · EST. 2026

The operating system for rental housing across Africa.

A complete visual identity for Makazi — the platform that lets landlords, caretakers and tenants run rentals from one place. Not a real-estate company. A technology company.

Prepared as an investor-ready brand proposal · Nairobi

Makazi is infrastructure, not a listings site.

Everything below serves one job: making a fragmented, cash-based, paper-driven category feel calm, modern and trustworthy — the way Stripe made payments feel, or Flutterwave made African money movement feel.

MISSION Simplify rental housing across Africa.	VISION Become the operating system for rental housing across the continent.
TRUST PROMISE Makazi never holds your money. Rent goes tenant → landlord directly. We automate the record.	

Positioning

We sit beside the fintech infrastructure players, not the property portals. Think of the reference set as a spectrum of craft:

Personality

Ten adjectives, expressed through restraint — flat colour, generous space, precise type. Premium is what we *don't* add.

Not this

Guardrails matter as much as the vision. We are never mistaken for:

- ✗ A construction company
- ✗ A real-estate agency
- ✗ A housing developer
- ✗ A roofs-and-keys clip-art brand

One mark, built from blocks.

The Makazi mark is an isometric “M” monogram assembled from modular blocks — individual units stacking and connecting into a single structure. It reads as digital infrastructure, growth and connection, never a house. Abstract, geometric, and legible from favicon to signage.

SYMBOLISM

Stacked, interlocking isometric blocks. Each block is a unit, a home, a record; together they assemble into one connected structure — the operating system beneath rental housing.

WHY IT FITS

Landlords manage 5–500 units; the mark literally stacks them. The 3-D build signals technology and infrastructure, the upward assembly signals growth, and the interlock signals connection — all without a roof, key or house.

HOW IT SCALES

Mark alone for app icon and favicon; vertical lockup for website, deck and print; horizontal lockup for product chrome and signage. Solid green stays crisp small; reversed to a single light tone on ink and green fields.

STRENGTHS

Distinctive ownable “M”, rich infrastructure story, premium isometric craft.

CARE

Keep line weights even; below ~20px use a simplified single-tone cut.

CLEARSPACE

Clear margin = the width of one block on every side. Never crowd the mark.

MINIMUM SIZES

Full lockup never below 120px wide (print: 22mm). Use the mark alone below that.

APP ICON & FAVICON

Mark centred on a solid tile, 15px-radius corner. Green tile is the default.

MISUSE — NEVER

✗ No gradient grounds

✗ Never distort

✗ No drop-shadow

✗ No green-on-clay clash

Deep green, warm clay, honest ink.

Green carries money, land and the mobile-money category tenants already trust; clay grounds us in African daylight and earth; ink keeps everything premium and legible. Flat fills only — no gradients.

		
Makazi Green PRIMARY #0E5C43 rgb(14, 92, 67) Growth, prosperity and land. Green is the colour of money across Africa and echoes the mobile-money category tenants already trust — reassurance without shouting.	Forest PRIMARY DEEP #093C2C rgb(9, 60, 44) The darker anchor for large fields and depth. Adds gravitas and premium weight where the primary needs to recede.	Clay ACCENT #DB6B3B rgb(219, 107, 59) Warm terracotta grounds Makazi in African earth and daylight. Energy and human warmth, reserved for the single most important action.
		
Ink SECONDARY / TEXT #0B140F rgb(11, 20, 15) A near-black with a green undertone. Confident, premium and legible — the backbone of type and interface chrome.	Stone NEUTRAL / MUTED #5C665F rgb(92, 102, 95) Secondary text, metadata and quiet UI. A green-grey that keeps the neutrals in the family instead of going cold.	Paper BACKGROUND #F6F5F0 rgb(246, 245, 240) A warm off-white. Softer than pure white, it feels human and premium across long reading and large surfaces.
		

Surface BACKGROUND #FFFFFF rgb(255, 255, 255) Cards, sheets and product surfaces sit cleanly on paper — the crisp layer that holds data.	Success STATE #1E9E5A rgb(30, 158, 90) Confirmed payments and reconciled records. Brighter than brand green so status never blurs into identity.	Warning STATE #E0A008 rgb(224, 160, 8) Arrears, due dates and reminders. Amber signals attention without alarm — a nudge, not a threat.
Error STATE #CF4B3E rgb(207, 75, 62) Failed transactions, overdue rent and destructive actions. A muted red — serious, never panicked.		

SEMANTIC STATES

Success green is brighter than brand green so states never blur into identity.

Two grotesks and a monospace.

A confident display voice, a quiet reading voice, and a precise numeric voice for the thing that matters most — money.

DISPLAY / HEADLINES / WORDMARK

Schibsted Grotesk

Weights 600–900. Tight tracking.
Norwegian grotesk with just enough
warmth to feel human, not corporate.

Housing, kept in order.

TEXT / UI / BODY

Hanken Grotesk

Weights 300–700. A humanist workhorse
— highly legible at 14px in dense
dashboards and long reading alike.

From a single dashboard, a landlord in Kileleshwa tracks rent across 40 units, dispatches a caretaker to a leaking tap, and sends a reminder over WhatsApp — before the morning matatu ride is over.

MONO / DATA / MONEY / USSD

JetBrains Mono

Weights 400–600. Tabular figures for
amounts, references and receipts —
where alignment signals trust.

The rules that make it feel like one thing.

A shared toolkit for spacing, icons, illustration, photography, buttons and layout — so every touchpoint, from an SMS to an investor deck, reads unmistakably Makazi.

Spacing — the 8-point grid

Everything spaces in multiples of 8 (4 for fine detail). Radii: 8px controls, 16px cards, 24px surfaces, 99px pills.

Icon style

1.7px monoline, rounded joins, 24px grid, generous counters. Never filled, never duotone. The same clean, geometric logic as the mark.

Illustration style

Flat geometric compositions built from the logo's isometric blocks and modular units. Two colours max per scene. No characters, no gradients.

Photography direction

real Kenyan landlords • natural light

Documentary, warm daylight, real people and real estates — not stock skyscrapers. Faces of the actual users: landlords, caretakers, tenants. Muted, filmic grade that sits beside the green.

Button style

Primary — Collect rent

Accent — the one action that matters

Dashboard & marketing tone

Dashboard — Calm, dense-but-airy, hairline dividers instead of boxes-in-boxes, data-first, money in mono. Linear's structure, Notion's ease.

Secondary — Export report

Flat fills, 10px radius, no shadow. One accent button per screen, maximum.

Marketing — Confident whitespace, one idea per screen, big type, one product truth at a time. Stripe-grade restraint with Kenyan warmth.

Three roles. One system.

The landlord gets a Linear-grade command centre. The caretaker gets a field console for move-ins, inspections and repairs. The tenant meets us wherever they already are — app, USSD or WhatsApp — while a Rental Passport quietly builds a verified history in the background.

USSD — full rent flow with zero data or app. Nobody is left out.

Mobile app — the premium door for smartphone tenants.

WhatsApp — reminders and receipts where tenants already chat.

Makazi Rental Passport

Every payment, lease and move quietly builds a tenant's verified rental history — from day one, whether they open the app or not. Think LinkedIn for renting: a portable, Makazi-verified record of trust.

Over years, this longitudinal data becomes the foundation for alternative credit scoring, rent advances and deposit financing — surfaced to partners only with the tenant's explicit consent. It is difficult for new entrants to replicate, and one of Makazi's strongest long-term moats.

WHAT IT NEVER STORES (YET)

No credit score. No loan eligibility. No lending decisions. Just a verified, consent-based history. Trust first — finance comes later.

Money never touches Makazi. Every flow initiates a direct payment to the landlord's own PayBill, Till or bank account. We surface the prompt, capture the reference, and reconcile the record — the trust promise, built into the UI.

Clear, warm, never salesy.

We speak like a competent friend who happens to be brilliant with money and systems. Plain English and Swahili warmth. We explain, we don't hype.

TAGLINE

Rent, sorted.

— or —

The home of rent.

✓ SAY THIS

"Your rent of KES 25,000 is due on 5 Aug.
Pay in seconds with M-Pesa."

"Payment received. Your receipt is saved."

"3 tenants are behind this month. Send a
friendly reminder?"

✗ NOT THIS

"Leverage our best-in-class rental payment
infrastructure solution!"

"Transaction successfully processed by
the system."

"WARNING: You have DEFAULTERS. Take
action NOW!!!"

A brand built to become Africa's rental infrastructure.

One mark that keeps things safe. One green that means growth. One system that scales from a WhatsApp message to a continent.
